How about closer to 11:45. I have a couple of calls this morning.

Just like to understand the logistics and any newer data,.

Actually Mike and I have been through all of it. Jim has updated the map with the high values for metals and organics. I'd like to show it to you, it is easier to explain...

There are about 10,000 pgs, but it doesn't include much *new* information-

About 3500 pages were the Test America data that we'd gotten partial pkgs from the citizens in early December. This is the August and September 2011 sampling for organics at about 10 homes...we still don't know where they all are because the locations are not plotted or specifically identified (they are abbreviations or initials- not defined) in the Chain of custody.- Ft. Meade is reviewing these pkgs for QA/QC

It does include 3 small packages of new data from Test America from Feb 2010, for homes of concern and there were some significant findings. I summarized them and raised them to Dawn for review on Jan 13th after review and at least one additional home would require water but Cabot is already providing them water right now while a methane removal system is being installed. There are several additional names with data of unknown locations...again no QA/QC with this pkg

There were also copies of the documents we got from DEP-(the 1 foot thick) that we got around Dec 23rd, but it filled in a couple tables that were missing.

There were 2 new Act 2 reports Mike and I have reviewed both and updated the map with findings of chemicals sampled in the drilling muds and pit liquid phase which clearly identified that the pits could be a source of the metals and organics in the wells. I'll be at the 8:30 update, but I can bring the map up to show you around 9:30??

Karen

Are you or your staff engaged in the process of reviewing Cabot data package that came in Jan 10.

Just like to understand who is engaged in this and how managed. Know it is a ton of info.

Thanks.
